

Sajjad Pets Clinic

Veterinary Local SEO Case Study

How Paw Rank strengthened the clinic's local visibility, corrected legacy ownership signals, expanded its Google presence, and recorded measurable search actions without a website.

CLIENT	Sajjad Pets Clinic
CLINIC OWNER	Dr. Usman
LOCATION	National Park, Sargodha, Pakistan
CAMPAIGN	Research in January 2026; active GBP implementation from February to late March 2026 (approx.)

#12 to #6

6 POSITIONS STRONGER

"veterinary clinic" average local rank

#11 to #7

4 POSITIONS STRONGER

"veterinarian near me" average local rank

DOCUMENTED PROOF

A local visibility problem, not a quality-of-care problem

Sajjad Pets Clinic had real local demand, but the digital identity did not clearly match its current owner, service range, or the way nearby pet owners searched for veterinary care.

Business	Sajjad Pets Clinic
Current clinic owner	Dr. Usman
Previous owner referenced online	Dr. Sajjad
Location	National Park, Sargodha, Pakistan
Website during campaign	None. A website was recommended but not commissioned.

ATTRIBUTION BOUNDARY

The two heatmaps provide the strongest directly comparable proof. The broader Google export includes time before, during, and after active management, so it is supporting context rather than a pure campaign total.

STARTING POINT

The clinic had demand. Its online identity was fragmented.

Dr. Usman had acquired the clinic from Dr. Sajjad. Advertising, word of mouth, and local billboards were already in use, but the digital foundation did not support a clear, repeatable path from search to contact.

Legacy ownership signals

Many local citations still presented Dr. Sajjad as the current owner. That created an entity-consistency problem after the business changed hands.

An underbuilt Google profile

Only one core service had been entered manually. Google had limited structured information about the clinic's full consultation, treatment, diagnostic, and surgical offering.

No patient-based review system

Review requests were informal. Some earlier reviews had been requested from friends who had not visited the clinic. Paw Rank replaced that approach with a workflow built around real visitors.

No website or service pages

The clinic did not have a website. The Google profile therefore carried most of the discovery and action burden, while service-page and online booking opportunities remained unavailable.

Limited visual trust signals

Clinic photos and profile information needed to better represent the physical practice, services, and current ownership.

Marketing without reliable attribution

Paid ads, billboards, referrals, and Google activity were running without a unified system for separating calls, visits, bookings, and revenue by source.

THE BUSINESS ISSUE

The clinic did not need louder marketing first. It needed a trustworthy digital identity that matched the business pet owners were actually visiting.

CAMPAIGN TIMELINE

Research, access, implementation, and reporting are kept separate

Exact dates are used only where the source files record them. Other workflow dates are shown as approximate ranges so the case study does not manufacture false precision.

December 2025	Informal guidance only Dr. Usman first asked about SEO after spending on advertising without enough return. Paw Rank shared initial recommendations at no charge. This was not active campaign management.
11 January 2026	Discovery conversation Dr. Usman returned to discuss local SEO. Paw Rank was occupied with other client work, so implementation was delayed while research began.
12-31 January 2026 (approx.)	Audit and competitor research Paw Rank reviewed the local market, competitor profiles, service coverage, review patterns, and citation consistency.
Early February 2026 (approx.)	Google Business Profile access Account access was received during February. Active profile and citation work could then begin.
February to 9 March 2026 (approx.)	Implementation Legacy citations were addressed, new citations were created, services and photos were expanded, and a patient-based review workflow was introduced.
10 March 2026	First documented heatmap The first supplied scan recorded #12 for "veterinary clinic," #11 for "veterinarian near me," and #20 for "pet vaccinations." It is an early implementation benchmark, not a day-one baseline.
11-22 March 2026	Continued refinement Paw Rank continued local profile work, citation follow-up, service expansion, review-process support, and ranking monitoring.
23 March 2026	Follow-up heatmap The supplied report recorded #6 for "animal hospital," #6 for "veterinary clinic," and #7 for "veterinarian near me."
Late March 2026 (approx.)	Active management ended Paw Rank ended the engagement because it did not have the operational capacity to continue. The departure was not a performance-related cancellation.
April to 16 July 2026	Post-engagement data window Google performance remained available, but Paw Rank was no longer actively managing the profile. Later data is not presented as active campaign work.

WHAT PAW RANK CHANGED

Visibility, trust, and action were treated as one system

The campaign concentrated on the clinic's local identity and Google Business Profile because the owner chose not to build a website during the engagement.

- 1 Clarified the clinic entity**
Paw Rank audited local references, identified listings that still associated the business with Dr. Sajjad, contacted directory owners where possible, and created new citations that reflected the clinic's current ownership and location.
- 2 Rebuilt the Google Business Profile**
The profile was expanded beyond one manually entered service. Services were organized around the clinic's real consultation, preventive care, treatment, diagnostic, vaccination, surgery, and follow-up capabilities.
- 3 Introduced a patient-based review workflow**
The clinic was asked to request feedback from real visitors first, follow up by email, and use a WhatsApp reminder only when appropriate. This case study does not claim credit for non-patient reviews.
- 4 Strengthened visual trust**
Clinic photos and profile information were updated so pet owners could better understand the practice, location, and treatment environment before calling or requesting directions.
- 5 Tracked local market coverage**
Grid-based heatmaps measured how the clinic appeared across the surrounding area, rather than checking only at the clinic address.
- 6 Recommended the missing website layer**
Paw Rank recommended a website with clear service pages and booking paths. Dr. Usman declined, so the campaign remained centered on the Google profile and local citations.

SCOPE BOUNDARY

No website SEO, online booking system, or revenue attribution system was implemented. The case study therefore focuses on Google visibility, local ranking movement, and profile actions.

LOCAL RANKING PROOF

Two directly comparable terms moved in thirteen days

The heatmap tool reports average ranking position across a local grid. Lower numbers are stronger. Its own note says non-ranking locations are treated as position 20, so the displayed average may be more favourable than the true market-wide position.

veterinary clinic

#12

to

#6

Improved by 6 positions

veterinarian near me

#11

to

#7

Improved by 4 positions

Additional recorded terms

Date	Keyword	Average	Interpretation
10 March 2026	pet vaccinations	#20	No directly comparable 23 March scan was supplied.
23 March 2026	animal hospital	#6	No directly comparable 10 March scan was supplied.

WHY THE WORDING IS CONSERVATIVE

The 10 March scan is the first documented benchmark supplied, but active implementation had already begun in February. The report therefore does not call it a pre-SEO or day-one baseline. Full original heatmap PDFs are reproduced without cropping in the evidence appendix.

GOOGLE BUSINESS PROFILE PROOF

The profile became a measurable path to calls and directions

Two source windows are available. They are reported separately because they cover different dates and do not use identical interaction categories.

Longer Google export: 1 December 2025 to 16 July 2026

2,117

Profile views

1,160

Google Search views

957

Google Maps views

1,828

Mobile views

102

Call actions

370

Direction requests

0

Website clicks

0

Bookings

WHAT THE LONGER EXPORT SHOWS

The profile generated measurable discovery and action even without a website. It does not isolate the active management period, and it does not prove completed appointments or revenue.

Dashboard window: February to July 2026

379

Business Profile interactions

91

Calls

36

Chat clicks

252

Direction requests

DO NOT ADD THE TWO WINDOWS TOGETHER

The dashboard and CSV cover different periods and categories. The 379-interaction dashboard total equals 91 calls + 36 chat clicks + 252 direction requests. It is not added to the 102 calls and 370 directions in the longer export.

PROOF AND TRANSPARENCY

Specific evidence is stronger than a larger unsupported story

Paw Rank’s own brand standard requires a clear difference between verified outcomes, project notes, and claims that the available evidence cannot establish.

Claim	Status	Evidence / qualifier
"veterinary clinic" moved #12 to #6	VERIFIED	Original heatmap reports dated 10 and 23 March 2026.
"veterinarian near me" moved #11 to #7	VERIFIED	Original heatmap reports dated 10 and 23 March 2026.
2,117 views, 102 calls, 370 directions	VERIFIED	Google CSV export covering 1 Dec 2025 to 16 Jul 2026.
379 interactions: 91 calls, 36 chats, 252 directions	VERIFIED	Google dashboard screenshots for Feb-Jul 2026.
4.8 rating from 40 reviews	VERIFIED SNAPSHOT	Visible in the supplied clinic profile screenshot.
Legacy citations referenced Dr. Sajjad	PROJECT NOTE	Reported from Paw Rank’s audit and outreach work. No before/after listing screenshots were supplied.
Review workflow was implemented	PROJECT NOTE	Based on the documented clinic process. Review growth count is not claimed.
Revenue or completed appointment growth	NOT ESTABLISHED	No booking, revenue, or patient-source records were supplied.
Stopping SEO caused the later decline	NOT ESTABLISHED	The dashboard declines later, but causation cannot be isolated from competition, seasonality, operations, or other changes.
Results will repeat in the US, UK, or Canada	NOT ESTABLISHED	This is one clinic in Pakistan. Market conditions and execution differ.

WHAT THIS CASE SHOWS

Local growth often breaks before the first call

A clinic can provide strong care and still lose search demand because its ownership signals, service information, review process, and contact path are incomplete or inconsistent.

- 1 Ownership consistency is a trust issue**
When a clinic changes hands, old listings can keep the previous owner attached to the business. Correcting those references helps search systems and pet owners understand who operates the clinic now.
- 2 One service is not the full clinic story**
A thin Google profile limits what Google and prospective clients can understand. Clear services make the clinic relevant to more specific local searches.
- 3 Reviews need an operating system**
A manual request at the clinic, followed by a respectful email and optional WhatsApp reminder, is more defensible than asking friends who did not use the service.
- 4 A Google profile can create action without a website**
The supplied data records profile views, calls, chat clicks, and direction requests. That proves the profile can function as a digital front desk, although a website would add stronger service pages and booking paths.
- 5 Short-term movement still needs long-term maintenance**
Early ranking movement can create opportunity. Durable visibility depends on continued updates, review activity, citation maintenance, content, and competitive response.
